

St. Mary's County COVID-19 Pandemic
Roadmap to Recovery
December 18, 2020

BACKGROUND

Maryland's Roadmap to Recovery was released by Governor Lawrence Hogan on Friday, April 24th, which outlines how the state plans to reopen after the COVID-19 pandemic. The four building blocks of the Roadmap to Recovery include (1) procuring Personal Protective Equipment (PPE) for healthcare workers; (2) generating hospital surge capacity; (3) having adequate testing capability; and (4) a robust tracing program.

The Governor's building blocks are consistent with the recovery efforts within the White House Coronavirus Task Force's *Guidelines for Opening Up America Again*.

The Governor's roadmap is not a calendar, or a set of fixed dates, but rather an important guide to show the intended path forward to recovery. The Roadmap is divided into Low Risk, Medium Risk and High Risk Stages for recovery; each stage may contain multiple phases.

While there is local flexibility in recovery decision-making, this should be within the parameters set forth by the Governor and his Administration for each stage and particular sub-phase. The St. Mary's County Health Officer and St. Mary's County Board of Health will work as needed with key community partners in local decision-making based on pandemic characteristics affecting the county and region. *Please note that St. Mary's County is permitted to be more restrictive than the state of Maryland, but not less restrictive.*

IMPLEMENTATION

Telework, Face Coverings, And Physical Distancing should continue throughout the different stages of recovery.

- 1) Employers and Employees should maximize telework plans;
- 2) Residents should continue to wear face coverings or masks in public places where they are exposed to others;
- 3) Residents should continue to practice physical distancing of at least six feet;
- 4) Residents should avoid indoor gatherings of 10 persons or more;
- 5.) Residents should not engage in non-essential travel. If a Marylander must travel, he/she shall take a COVID 19 test upon return to the state and shall quarantine until negative test result or 10 days. State exempt are Delaware, Pennsylvania, Virginia, West Virginia & DC.

DATA INFORMING LOCAL DECISION-MAKING

The below data, as available, will be monitored by public health officials and reviewed, as allowable by federal and state confidentiality laws, with the St. Mary’s County Board of Health to assist with local decision-making. Sharing of data with the general public is subject to federal and state confidentiality laws, state executive orders, and review by the Maryland State Attorney General’s Office.

Local Metrics

- (1) Number of known hospitalizations impacting St. Mary’s County residents with COVID-19
- (2) Number of intensive care utilizations impacting St. Mary’s County residents with COVID-19
- (3) Incidence of COVID-19 diagnoses in St. Mary’s County, and the rate of change in incidence rate
- (4) Deaths associated with COVID-19 in St. Mary’s County residents or occurring in St. Mary’s County residential facilities
- (5) Findings from public health disease investigation efforts that may suggest outbreaks involving community transmission
- (6) Emergency Department utilization by St. Mary’s County residents for respiratory symptoms or influenza-like illness
- (7) Local inpatient bed and intensive care bed capacity
- (8) PPE supply availability for long-term needs of local health care workers, first responders, and law enforcement
- (9) Local availability of COVID-19 testing supplies and laboratory capacity to process these tests
- (10) Hospital surge models or projections impacting St. Mary’s County

Regional Metrics

To the extent possible, regional data for Southern Maryland will be monitored by local health officials. Such data may more comprehensively predict risk for St. Mary’s County residents given the mobility of residents across county lines in Southern Maryland when stay-at-home orders are not in effect or when essential workers traverse county lines.

- (1) Number of known hospitalizations impacting southern Maryland residents with COVID-19
- (2) Number of intensive care utilizations impacting southern Maryland residents with COVID-19
- (3) Incidence of COVID-19 diagnoses in southern Maryland, and the rate of change in incidence rate
- (4) Deaths associated with COVID-19 in southern Maryland residents or occurring in southern Maryland residential facilities
- (5) Findings from public health disease investigation efforts that may suggest outbreaks involving community transmission in southern Maryland
- (6) Emergency Department utilization by southern Maryland residents for respiratory symptoms or influenza-like illness
- (7) Southern Maryland inpatient bed and intensive care bed capacity
- (8) PPE supply availability for long-term needs of regional health care workers, first responders, and law enforcement
- (9) Regional availability of COVID-19 testing supplies and laboratory capacity to process these tests
- (10) Regional hospital surge models or projections
